

Rail Money

2-Week X Campaign Built To Reach The First 1,000 Real Users

Campaign idea: Give your income a default route.

Core promise

Every deposit becomes spend money and future money automatically. Rail should sell financial intelligence for income, not generic finance tracking.

Goal	Primary CTA	Secondary CTA
1,000 real TestFlight users	Join the Rail Money TestFlight beta	Reply RAIL for the beta link

Acquisition Targets

The old calendar was a posting schedule. This version is a distribution campaign. To reach 1,000 users, Rail needs enough impressions, repeated CTAs, warm replies, founder distribution, and creator/community amplification.

Stage	Target
Meaningful X impressions	150,000-250,000
Profile / landing visits	6,000-10,000
TestFlight link clicks	2,000-3,000
Successful beta installs	1,000

- 3 original posts per day from the Rail account.
- 1 founder post per day.
- 30-50 useful replies per day under relevant X conversations.
- 10-20 warm DMs per day to people who engage.
- 1 product demo clip every 2-3 days.
- Boost only posts that already prove organic pull.

Positioning And Profile Setup

Do	Do not
Say financial intelligence for your income.	Lead with send/receive/swap as the main story.
Say give your income a default route.	Sound like a generic budgeting app.
Say 70% spend, 30% stash, automatically.	Overpromise returns.
Show salary, payday, freelance payout, remittance, and stablecoin moments.	Use vague AI language without explaining the rule.

Bio

Financial intelligence for your income. Deposit once. Rail automatically splits your money into spend and stash. Join the TestFlight beta.

Pinned post

Your income needs a default route.

Rail Money automatically splits every deposit:
70% stays spendable.
30% moves to stash.

No stock picking. No timing. No spreadsheet.

We are opening TestFlight access for early users.

Join here: [TestFlight link]

Day 1 - Launch The Position

Objective

Make people understand Rail in one sentence.

Slot	Post
Morning	Getting paid is not the plan. What happens next is. Rail Money gives your income a default route: spend some, stash some, automatically. We are opening TestFlight access today. Join here: [link]
Afternoon	Most finance apps ask you to track money after it is gone. Rail acts when money arrives. Deposit lands. 70% stays spendable. 30% moves to stash. That is financial intelligence for income.
Evening	We built Rail because optional saving is the problem. If saving depends on motivation, the month wins. So Rail makes the first money move automatic. Beta is live on TestFlight: [link]
Creative asset	Success metric
Simple deposit -> spend/stash graphic.	100+ link clicks or 50+ access replies.

Day 2 - Attack The Real Problem

Objective

Own the pain of salary leakage.

Slot	Post
Morning	Most people do not fail at saving because they are careless. They fail because income has no system after it lands. Rail fixes the first move.
Afternoon	Why people earn more and still end the month broke: 1. Money lands with no route 2. Spending starts before saving 3. Saving depends on mood 4. Investing feels like homework 5. Progress is invisible Rail changes the order.
Evening	Your salary needs a system before it needs motivation. Join the Rail beta: [link]
Creative asset	Success metric
Text post plus split diagram.	Replies describing payday pain.

Day 3 - Product Demo

Objective

Prove Rail is real.

Slot	Post
Morning	Financial intelligence should not feel mysterious. In Rail, it means one visible rule: money arrives -> spend balance funded -> stash starts working.
Afternoon	Watch what happens when money enters Rail. 1. Deposit lands 2. Rail splits it 3. Spend balance updates 4. Stash balance updates TestFlight beta: [link]
Evening	Your bank shows a balance. Rail shows what your money is doing.
Creative asset	Success metric
Screen recording of deposit/split/station flow.	Demo video completion and link clicks.

Day 4 - Engagement With Intent

Objective

Create replies that reveal user pain and acquisition leads.

Slot	Post
Morning	Be honest: When money enters your account, what usually happens first? A. Bills B. Impulse spending C. Saving D. Confusion
Afternoon	The most expensive part of payday is not one purchase. It is having no default plan for the money.
Evening	We are inviting early users who want their income to split automatically into spend and stash. Reply RAIL and I will send the TestFlight link.
Creative asset	
Poll or reply prompt.	
Success metric	
100+ replies/DMs.	

Day 5 - Trust And Clarity

Objective

Reduce fear around automation.

Slot	Post
Morning	Automation should be visible, not mysterious. Rail shows: - what you can spend - what moved to stash - what rule moved it - what state your money is in
Afternoon	What happens when you deposit into Rail? 1. Deposit is detected 2. Rail applies the split rule 3. Spend balance updates 4. Stash balance updates 5. You see the status in one place The goal is simple: less money confusion.
Evening	If a finance app needs 12 screens to explain what is happening to your money, it is already too complicated. Rail is built around one rule.
Creative asset	Success metric
FAQ-style trust graphic.	Fewer trust objections in replies/DMs.

Day 6 - Founder Story

Objective

Build credibility and emotional context.

Slot	Post
Morning	I do not think people need more financial homework. They need better defaults. Rail exists because the first money decision after income lands should not depend on mood, stress, or discipline.
Afternoon	Rail is not trying to be a budgeting app. It is trying to change what happens before budgeting is needed.
Evening	We are taking the first serious TestFlight users this week. If you want to help shape Rail, join here: [link]
Creative asset	Success metric
Founder video or note screenshot.	High-quality beta feedback signups.

Day 7 - Week 1 Recap And Proof

Objective

Show momentum.

Slot	Post
Morning	Week 1 beta notes: - People understand the 70/30 split fast - The strongest reaction is I need this for salary - The biggest question is trust and withdrawal clarity We are building that feedback into Rail.
Afternoon	If your money had a default route, what would you want it to do first? Spend? Save? Invest? Split?
Evening	We are opening more TestFlight slots for people who want to test Rail with real feedback. Join here: [link]
Creative asset	Success metric
Feedback screenshot with names hidden.	150+ beta clicks over weekend.

Day 8 - Make Financial Intelligence Concrete

Objective

Define the category clearly.

Slot	Post
Morning	Financial intelligence is not magic. It is a system that knows what should happen to money when it arrives. In Rail: 70% spend. 30% stash. Automatically.
Afternoon	3 ways Rail helps your income move better: 1. It gives every deposit a default route 2. It separates spend money from future money 3. It shows the status of your money in one place The goal is not more charts. The goal is less confusion.
Evening	Most finance apps give you tools. Rail gives your income a system.
Creative asset	Success metric
Definition card.	Link clicks from non-followers.

Day 9 - Social Proof

Objective

Show that real people are testing.

Slot	Post
Morning	Early Rail feedback: The split makes sense immediately. That is the point. You should not need a finance course to know what your money is doing.
Afternoon	Real beta users are helping us answer the most important questions: - Is the split clear? - Is the stash understandable? - Does the app feel trustworthy? - What blocks first deposit?
Evening	Want to be part of the first 1,000 Rail testers? Join the TestFlight beta: [link]

Creative asset	Success metric
Feedback screenshots.	100+ beta joins or waitlist signups.

Day 10 - Tutorial

Objective

Convert interested users by showing a specific use case.

Slot	Post
Morning	Use case: You receive money. You want some liquid. You want some protected from impulse spending. Rail handles the first split automatically.
Afternoon	How to use Rail after money enters: 1. Check Spend 2. Check Stash 3. See what changed 4. Keep moving No manual spreadsheet.
Evening	The best finance product is the one that reduces the number of decisions between income and progress.
Creative asset	Success metric
Tutorial screen recording.	Reduced onboarding questions.

Day 11 - Poll With Conversion Follow-Up

Objective

Identify user priorities and DM warm leads.

Slot	Post
Morning	What matters most in a money app? A. Easy spending B. Saving automatically C. Investing without stress D. Understanding money better
Afternoon	The answer is usually not one feature. People want money to be liquid enough for life and structured enough for progress. That is why Rail splits deposits.
Evening	If you voted for saving automatically or investing without stress, you are exactly who we want in the beta. Reply RAIL and I will send the TestFlight link.

Creative asset	Success metric
Native X poll.	100+ warm leads.

Day 12 - Building In Public

Objective

Make the campaign feel alive.

Slot	Post
Morning	Building Rail publicly is useful because money products need trust before scale. We want early users to challenge the product: - What is unclear? - What feels risky? - What would stop you from depositing?
Afternoon	Startup Village helped us sharpen one thing: Rail is not another fintech app. It is a default route for income.
Evening	We are still accepting serious TestFlight users. If you will test and give feedback, join here: [link]

Creative asset	Success metric
Startup Village recap or founder video.	High-quality feedback signups.

Day 13 - Objections

Objective

Answer blockers before they stop conversion.

Slot	Post
Morning	Questions we expect: Can I still spend my money? Yes. 70% stays spendable. What happens to the rest? 30% moves to stash. Can I see it? Yes. That is the point.
Afternoon	What Rail is not: - not a budgeting app - not a trading game - not a spreadsheet - not magic AI What Rail is: a rule-based money system that acts when income arrives.
Evening	If you want a finance app that removes decisions instead of adding more, join the beta. [link]
Creative asset	Success metric
FAQ card.	Improved click-to-install conversion.

Day 14 - Final Push To First 1,000

Objective

Create urgency and close the campaign.

Slot	Post
Morning	We are building the first 1,000-user beta group for Rail Money. Not followers. Not passive likes. Real testers. If you want financial intelligence for your income, join today.
Afternoon	Rail's promise is simple: money enters -> money gets a route. 70% spend. 30% stash. Automatically.
Evening	Last push for this beta wave. If your income needs a system, join Rail Money on TestFlight. [link]
Creative asset	Success metric
Countdown graphic or founder video.	1,000 total installs or bottleneck identified.

Reply And DM Playbook

Use replies to distribute the campaign. Do not spam links first. Acknowledge the point, add a useful money insight, and mention Rail only when relevant.

Situation	Reply
Payday complaint	This is exactly why income needs a default route. Most people do not need more tracking after the money is gone; they need the first move to happen automatically.
Budgeting complaint	The problem is not always spending. Sometimes it is that spending starts before saving has a chance.
Product curiosity	We are testing this with Rail: deposit lands, part stays spendable, part moves to stash. The goal is to reduce the first decision after payday.

DM template

Appreciate you engaging with the Rail post. We are opening TestFlight access for early users who want to test financial intelligence for income: every deposit gets split into spend and stash automatically.

Here is the beta link: [link]

If you test it, the main feedback we need is: what feels unclear before you would trust it with real money?

Creator / Community Distribution

To realistically reach 1,000 users, recruit 10-20 small accounts across Nigerian tech, personal finance, Startup Village, freelancers, creator economy, and crypto/stablecoin communities.

Creator brief

Talk about the problem of income having no default route. Show Rail as the app that splits deposits into spend and stash automatically. Do not overpromise returns. CTA: join the TestFlight beta.

Daily metric	Why it matters
Impressions	Shows reach.
Profile visits	Shows curiosity.
Link clicks	Shows demand.
TestFlight installs	Shows conversion.
Replies/DMs	Shows qualitative intent.
Top hook	Shows message-market fit.
Top objection	Shows conversion blocker.
Cost per install, if boosted	Shows paid viability.

Final Checklist

- TestFlight link works.
- Landing page or fallback waitlist exists.
- X bio updated.
- Pinned post updated.
- UTM links created.
- Founder account aligned.
- Demo clip ready.
- FAQ/trust page ready.
- Feedback form ready.
- Daily metric sheet ready.
- DM response template ready.
